

✦ Correct data

[Examination report from Korea Basic Science Institute]

Fast-penetrating electrolyzed alkali water

As electrolyzed alkali water consists with smaller clusters than general water, it can be absorbed into

body fast, and allows easy elimination of waste product. *cluster: it means the number of water molecules.

For general water, about 15~16ea of water molecules are in a cluster.

Electrolyzed alkali water, its small water molecule cluster of 1/3 size of general water's cluster is penetrating to the deepest part of our body.

-NMR analysis

NMR shows the numeric data by the size of water cluster

Type	Alkali water	Tap water	Jangjuk	Mineral water	Milk	Distilled water	Reverse-osmosis water	Acid water
Size(Hz)	57 Hz	20 Hz	70~80 Hz	94 Hz	20 Hz	18 Hz	153 Hz	280 Hz
